

# Where to Watch Wildlife in... NEW YORK!

New York State's wildlife diversity includes 92 mammals, 376 birds, and 71 amphibians and reptiles, and you can visit many of them in their own homes! Wildlife preserves, forests, and State and National Parks in the state have thousands of miles of hiking trails where a wildlife adventure awaits you. You can view hundreds of species, from humming-birds to bald eagles, river otters and red foxes, live and in vivid colors in their natural habitats, not in a zoo.
